"The P.E.B.A. (Plan for the Elimination of Architectural Barriers) is a fundamental plan to ensure accessibility and usability of buildings and public spaces for all citizens.

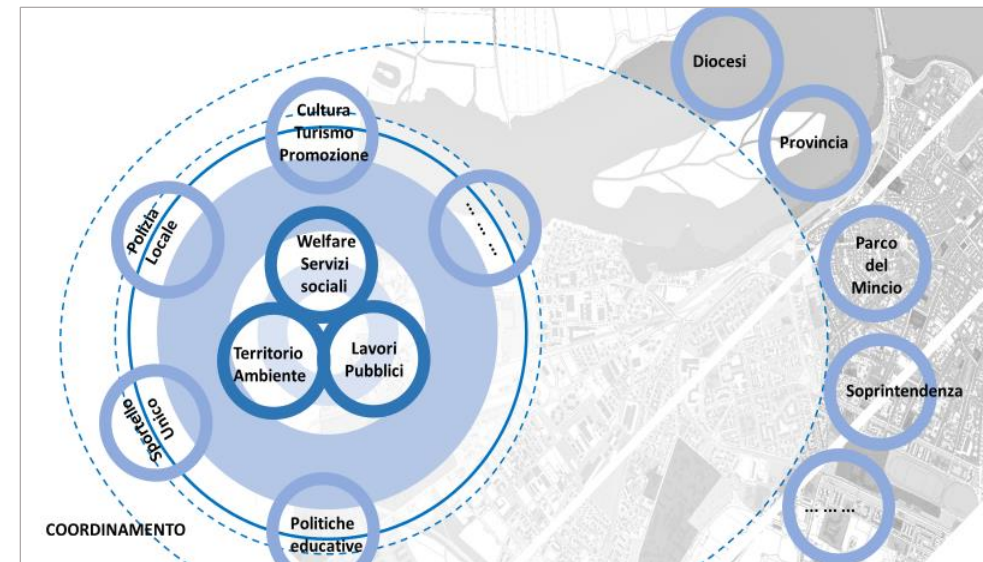

This plan starts from the removal of architectural barriers, but it points to make the city more inclusive and sustainable to allow everyone greater autonomy and security.

11 CITTÀ E COMUNITÀ
SOSTENIBILI

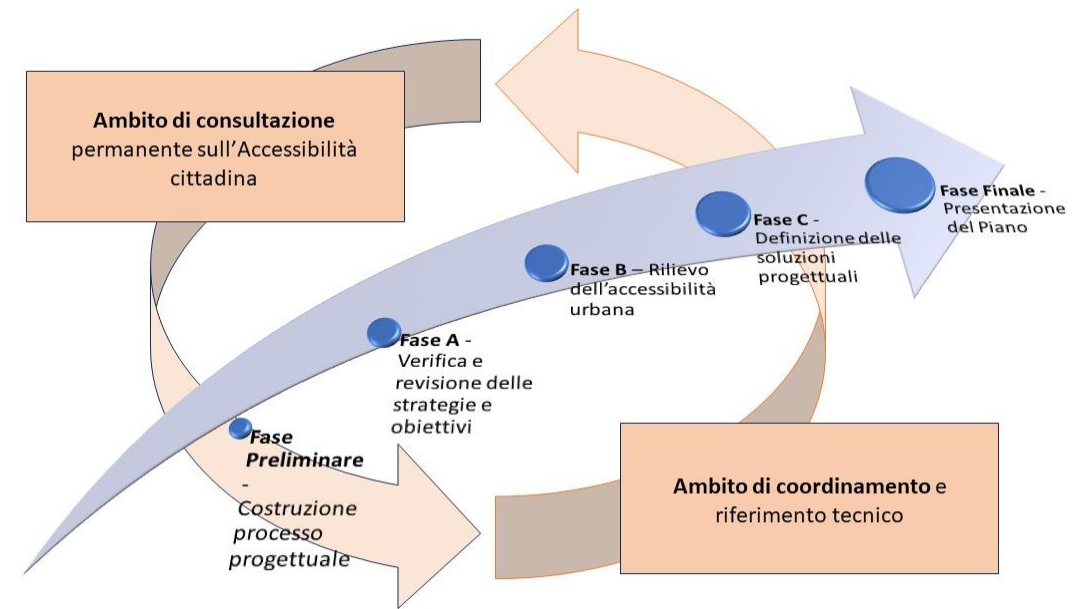

The project, carried out in synergy with the municipal administration of Mantua, aims to identify the most appropriate policies and strategies for the development of the Plan and introduces the activation of two boards of consultation:

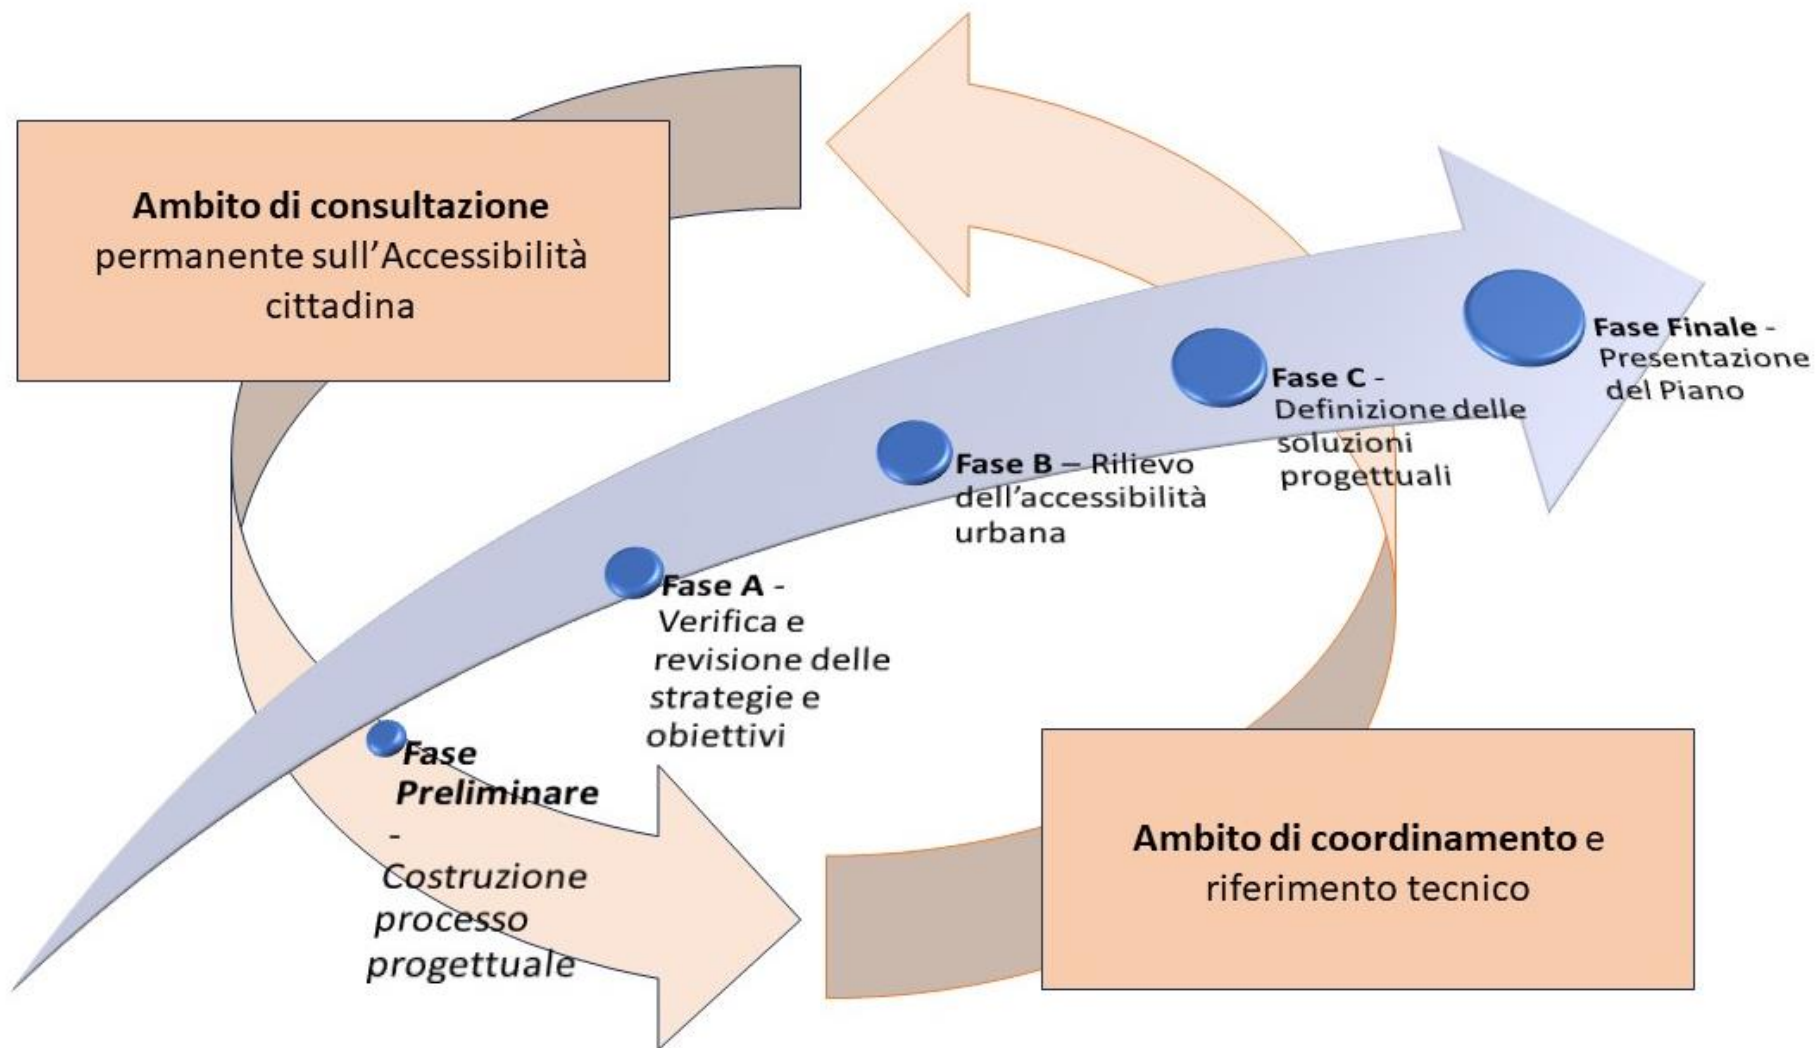

- "Permanent consultation board on City Accessibility", to allow the participation of all stakeholders;
- "Coordination and technical reference board" to answer to the needs and requirements emerged in the first board.

The project is developed in five phases, among which only four are handled by Politecnico di Milano, as follow:

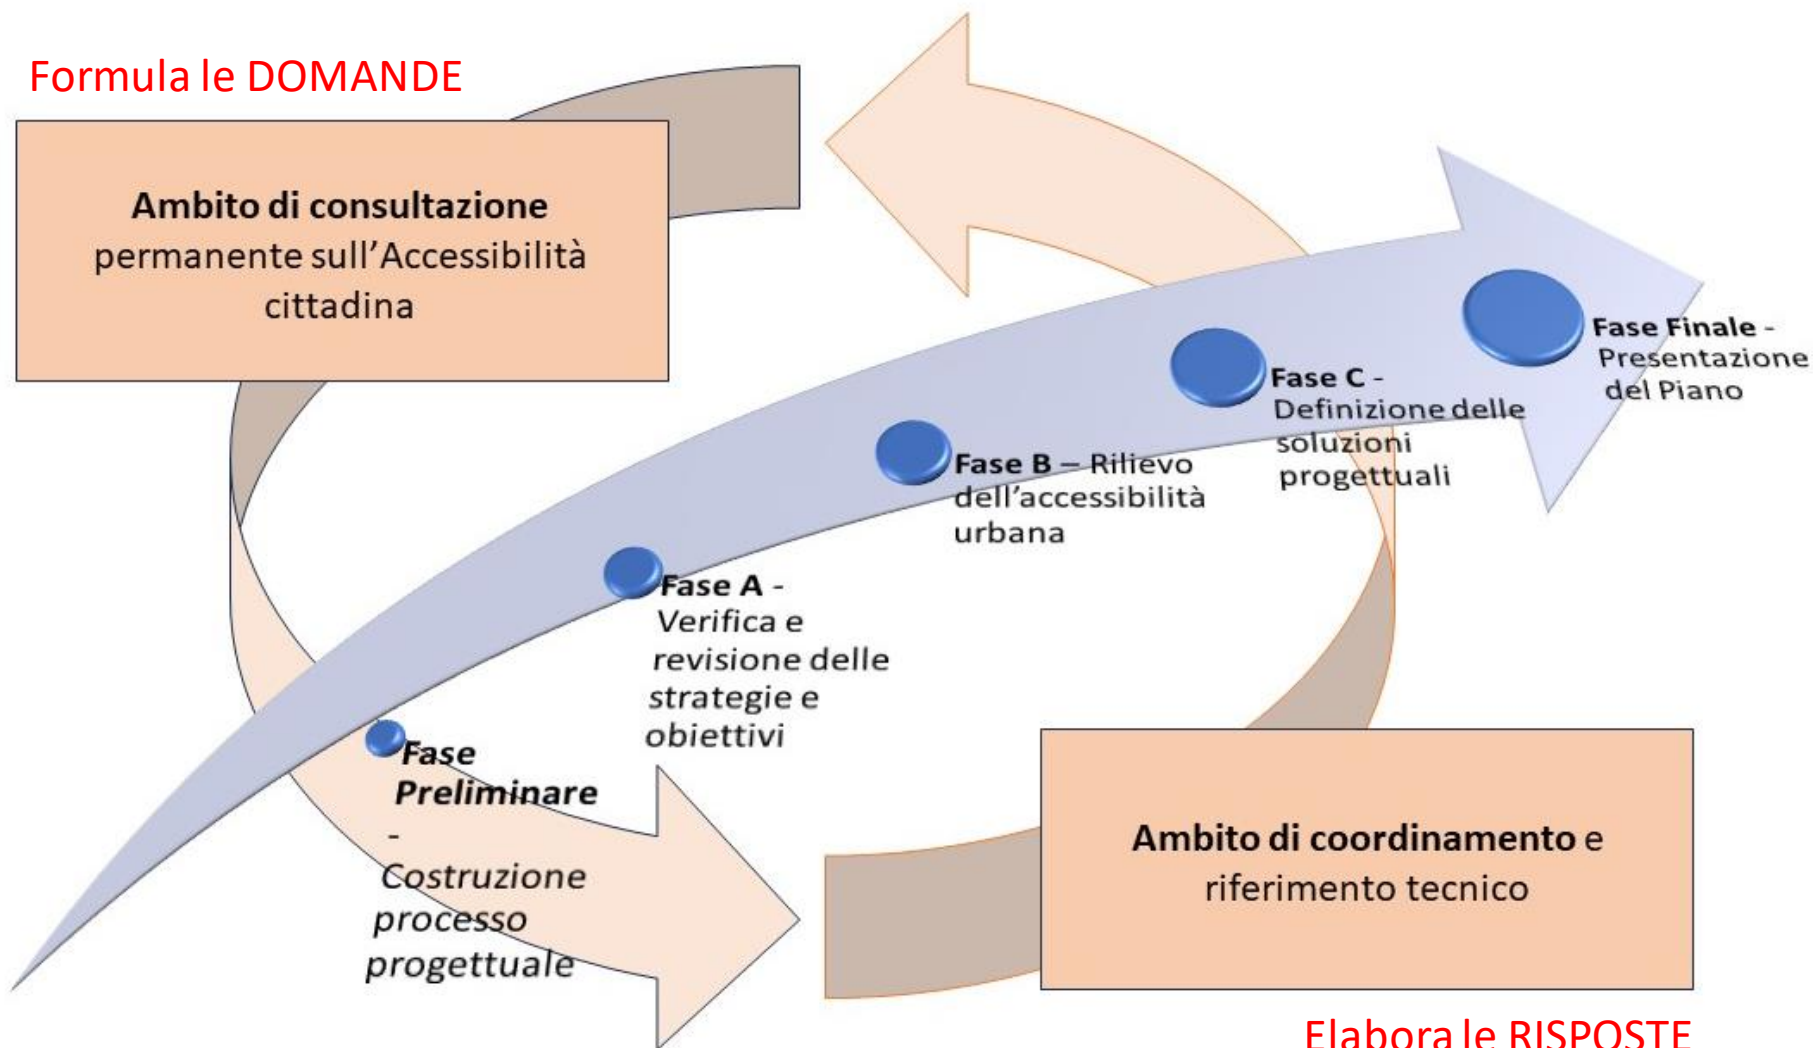

- Preliminary Phase – Design of the process and coordination of the actors involved.
- Phase A - Testing and Reviewing the PEBA strategies and objectives.
- Phase C - Definition of design solutions, planning of interventions and drafting the Plan for the Elimination of Architectural Barriers.
- Final Phase - Presentation of the Plan to the citizens.
